 BUSINESS RECOMMENDATIONS

- ✓ Improve route optimization in regions experiencing higher delivery delays.
- ✓ Increase the utilization of cost-efficient vehicles to reduce operational expenses.
- ✓ Allocate additional delivery resources during adverse weather conditions.
- ✓ Continuously monitor delivery partner performance to improve customer satisfaction.

 PROJECT SUMMARY

This project demonstrates an end-to-end supply chain analytics workflow using Python, MySQL, and Power BI. Data was cleaned, analyzed using SQL, and transformed into interactive dashboards that provide executive, operational, and business-level insights to support data-driven decision-making.
